local focus, global strength

mobility

- Digital Enhanced Cordless Telephony
- Improved response times
- Better internal communications
- Reduced call costs

DECT

Add the freedom of cordless technology to your Samsung DCS.

DECT (Digital Enhanced Cordless Telephony) takes office telephony into new areas, giving your staff complete freedom to move around the office, while still being able to make and take calls. DCS DECT handsets act just like a DCS desktop phone, so that staff can stay in touch and manage their calls from anywhere in the building.

Never miss a call with DECT

Digital Communication Solutions

The **DCS** utilises a network of base stations to effectively create your own cordless network for your workplace. To increase the area to be covered, simply add base stations. Interruption free handover between base stations means staff can roam over large industrial, retail office or hospitality complexes and remain within range. And internal calls on your site are free - no mobile charges apply.

DECT 8000 Cordless handset

The **DECT 8000** handset offers the latest mobile technology and improved functionality at a very competitive price. Equipped with a convenient, user-friendly navigation system and Caller ID (CLIP) that can be accessed through a simple menu display.
